

This hearing will examine the environmental issues presented when water bottling plants extract groundwater and spring water from water sources in rural communities.

Specifically, the hearing will address:

- *The broader policy context of the water bottling industry;
- *The impact on communities of water bottling plants;
- *The geological/hydrological dynamics and environmental effects of extraction on the surrounding watershed, wetlands and riparian systems;
- *The growth, practices, and policies of the water bottling industry; and
- *The adequacy of state property rights, state permitting systems, and federal regulations in addressing these issues.

Wednesday, December 12, 2007

2 p.m.

2154 Rayburn

Washington, D.C. 20515
